

Partner Clinics with Direct Veterinary Surgery Operating Privileges

I am working to secure operating privileges at 2-3 practices for outpatient surgery. This model, for the participating practice, would include “adopting” a surgical case for the surgical day from practices outside my travel radius or practices not able to accommodate their clients’ surgical needs on any given day. The experience for a partner clinic would involve working closely with DVS in the scheduling phase and a strong/flexible anesthesia team to support the case variety. If you are interested in pursuing this collaboration, please let me know and we can discuss in detail the benefits and challenges. I can provide references from my partner clinics in MN/WI to help understand the model as well.

Once I have partner clinics established, I will open discussions with a wider radius of practices and pet owners who might benefit from the outpatient, mobile surgery model DVS offers to the area. Please stay tuned.

Please feel free to contact me to chat about this potential relationship and future options.
